

Composites

Light Cure Lab Composite

CERAMAGE KITS - SHOFU

CERAMAGE KITS - SHOFU

Ceramage contains 73% by weight of micro-fine ceramic particle, which are embedded in an organic polymer matrix and combines the advantages of ceramic and composite to give a light-curing "esthetic" composite for use in any indication. This composition increases the homogenous structure resulting in optimised physical properties and enhanced esthetics.

Indications:

- * Fully veneered crowns and bridges
- * Fully veneered telescopic and implant-supported restorations
- * Precision attachments
- * Occlusal facings
- * Inlays / onlays
- * Veneers
- * Long-term temporary restorations
- * Modifying conventional acrylic teeth

Benefits:

- * Excellent flexural and compressive strength
- * Excellent abrasion resistance of occlusal facings
- * Highest aesthetics with a light refractive index similar to natural teeth
- * Extensive range of translucent effect colors
- * High color stability
- * Perfect viscosity and modelling properties

CERAMAGE BODY - SHOFU

CERAMAGE BODY - SHOFU

Ceramage is a zirconium silicate micro ceramic which creates indirect restorations that exhibit virtually the same light transmission as natural teeth, maintaining a remarkable translucency. Ceramage bonds to a variety of substructures, including non-precious and high noble alloys.

With ceramage, an extensive shade selection for natural tooth and gum color reproduction, in addition to new bleach white shades, ceramage can be used to create superior anterior and posterior crowns, veneers, implant-supported restorations and inlays and onlays. Ceramage full set of gum colors are also ideal for replicating gingival anatomy.

Ceramage Advantages:

- * Microfine structure gives high compressive strength
- * Does not vitrify, maintaining excellent color stability
- * Outstanding tensile strength and elasticity
- * Superior wear characteristics

CERAMAGE ACCESSORIES - SHOFU

CERAMAGE ACCESSORIES - SHOFU

Using the experience and knowledge gained over many years, SHOFU has developed Ceramage.

Ceramage contains 73% by weight of micro-fine ceramic particle, which are embedded in an organic polymer matrix and combines the advantages of ceramic and composite to give a light-curing "esthetic" composite for use in any indication. This composition increases the homogenous structure resulting in optimised physical properties and enhanced esthetics.

Ceramage combines natural color reproduction with extraordinary strength and elasticity and is recommended for conventional cases as well as implant restorations.

Indications:

- * Fully veneered crowns and bridges
- * Fully veneered telescopic and implant-supported restorations
- * Precision attachments
- * Occlusal facings
- * Inlays / onlays
- * Veneers
- * Long-term temporary restorations
- * Modifying conventional acrylic teeth

Benefits:

- * Excellent flexural and compressive strength
- * Excellent abrasion resistance of occlusal facings
- * Highest aesthetics with a light refractive index similar to natural teeth
- * Extensive range of translucent effect colors
- * High color stability
- * Perfect viscosity and modelling properties
- * Superb polishability
- * Outstanding plaque resistance
- * Excellent biocompatibility

CERAMAGE CERVICAL - SHOFU

CERAMAGE CERVICAL - SHOFU

Ceramage is a zirconium silicate micro ceramic which creates indirect restorations that exhibit virtually the same light transmission as natural teeth, maintaining a remarkable translucency. Ceramage bonds to a variety of substructures, including non-precious and high noble alloys.

With ceramage, an extensive shade selection for natural tooth and gum color reproduction, in addition to new bleach white shades, ceramage can be used to create superior anterior and posterior crowns, veneers, implant-supported restorations and inlays and onlays. Ceramage full set of gum colors are also ideal for replicating gingival anatomy.

Ceramage Advantages:

- * Microfine structure gives high compressive strength
- * Does not vitrify, maintaining excellent color stability
- * Outstanding tensile strength and elasticity
- * Superior wear characteristics

Raves And Recommendations:

- * Ceramage exhibits perfect bond strength to any alloy, even to titanium.
- * Ceramage can be used on existing porcelain restorations.
- * For the best glaze on ceramage, use dura polish and dura polish-dia

"As a dental laboratory owner, it's important to me to have materials that meet the demands of the ever-changing dental industry and ceramage, far exceeds other composite materials on the market in versatility, strength, and esthetics.

CERAMAGE OPAQUE UNIVERSAL - SHOFU

CERAMAGE OPAQUE UNIVERSAL - SHOFU

The new light-cured opaquer pastes of the Universal Opaque system offer excellent masking properties and bond strengths on all commonly used dental alloys, thanks to specially optimized micro-fillers.

Improved thixotropic properties have now further increased softness and flowability.

The pastes are extremely easy and quick to apply. This ready-to-use opaquer system, consisting of one Pre-Opaque and 31 Opaque materials, can be used as a base for the reproduction of any shade of the Ceramage and Solidex composite systems, and also in combination with other crown and bridge composites.

Indication

Masking of frameworks made of precious and non-precious alloys

Benefits

- * Universal system
- * Easy and quick to apply

- * Excellent masking properties
- * Durable bond

CERAMAGE TRANSPARENT - SHOFU

CERAMAGE TRANSPARENT - SHOFU

Using the experience and knowledge gained over many years, SHOFU has developed Ceramage.

Ceramage contains 73% by weight of micro-fine ceramic particle, which are embedded in an organic polymer matrix and combines the advantages of ceramic and composite to give a light-curing "esthetic" composite for use in any indication. This composition increases the homogenous structure resulting in optimised

physical properties and enhanced esthetics.

LITE ART COLOR CERAMAGE - SHOFU

LITE ART COLOR CERAMAGE - SHOFU

Lite Art light-curing coloring Stain pastes for Ceramage are designed to recreate the internal effects and characteristics of natural teeth.

Works in composites, and all light cure compounds.

Characteristics:

- * Excellent curing characteristics due to newly developed multifunctional monomer and photo initiator.
- * Low viscosity - easy brush technique.
- * Fluorescence of natural teeth.
- * Wide range of expressive colors for individual characteristics.
- * Supreme handling properties.

OPAQUE MODIFIER - SHOFU

OPAQUE MODIFIER - SHOFU

Using the experience and knowledge gained over many years, SHOFU has developed Ceramage.

Ceramage contains 73% by weight of micro-fine ceramic particle, which are embedded in an organic polymer matrix and combines the advantages of ceramic and composite to give a light-curing "esthetic" composite for use in any indication. This composition increases the homogenous structure resulting in optimised physical properties and enhanced esthetics.

Ceramage combines natural color reproduction with extraordinary strength and elasticity and is recommended for conventional cases as well as implant restorations.

Indications:

- * Fully veneered crowns and bridges
- * Fully veneered telescopic and implant-supported restorations
- * Precision attachments
- * Occlusal facings
- * Inlays / Onlays
- * Veneers
- * Long-Term temporary restorations
- * Modifying conventional acrylic teeth

Benefits:

- * Excellent flexural and compressive strength
- * Excellent abrasion resistance of occlusal facings
- * Highest aesthetics with a light refractive index similar to natural teeth
- * Extensive range of translucent effect colors
- * High color stability
- * Perfect viscosity and modelling properties
- * Superb polishability
- * Outstanding plaque resistance
- * Excellent biocompatibility

PARAFIL LAB - PRIME DENTAL

PARAFIL LAB - PRIME DENTAL

Features:

Parafil LAB is a light-cured indirect restoration system for crown and bridge, inlays, onlays and veneers. It has unsurpassed durability, natural opalescence and excellent lifelike esthetics. The unique chemistry of Parafil LAB couples nano particle/ZIRCONIUM filler with a urethane dimethacrylate matrix to produce a superior composite with unsurpassed high strength, wear resistance and superior polishability. Parafil LAB material is excellently polishable and allows highly esthetic results to be achieved. The material structure of Parafil LAB contributes to the excellent grinding and polishing properties. Parafil LAB offers Parafil

Gingiva for gingiva build-up. Used separately, each product gives superb results. If a patient requires teeth and gum restorations where their ?white? and ?red? esthetics need to be finely balanced, then the complete system is ideal. The shades and accessories of both products are fully harmonized so you can precisely color match your restoration to the patient and to each other, regardless of age or ethnicity.

Ease Of Cure

- * Does not require an oven for a final cure
- * Cure composite with any LED light

Superior Physical

- * Properties
- * High wear resistance
- * Unsurpassed strength
- * Can be used for a wide range of applications

Optimized Filler Particle Size

- * Paste has a consistency that makes it easier to mold and shape when compared to porcelain and ceramic.
- * Holds shape without slumping
- * Tooth like light reflection
- * No problem polishing
