ULTRA-THIN DISC - KEYSTONE

ULTRA-THIN DISC - KEYSTONE

Keystone Industries Ultra-thin Abrasive Discs have the exceptional combination of thinness, strength and cutting qualities, which have made them an indispensable industry standard. These abrasives are used for fine cutting and finishing on porcelain interproximal and margins. The pure fine silicon carbide abrasive is a unique formulation that will not discolor porcelain. Best used between 10,000 and 12,000 rpm.

Features:

- * Made of silicon carbide
- * Available Color: Gray
- * Available Size: 7/8" x .009" (22.2 x 0.22mm)
- * Available in 25/box

VERI-THIN DISCS - KEYSTONE

VERI-THIN DISCS - KEYSTONE

These Veri-Thin Discs are much thinner than the regular Joe Dandy Discs, but still maintains the strength and fast, cool cutting qualities. These discs, made of silicon carbide, are especially suited for cutting and finishing porcelain and gold. Ideal speeds for the discs are between 10,000 and 12,000 rpm.

Features:

- * Made of silicon carbide
- * Available Color: Light gray
- * Available Sizes: 3/4" x .015" (19 x 0.38 mm), 7/8" x .015" (22.2 x 0.38 mm)
- * Available in 50/Box

DYNEX SEPARATING DISCS - RENFERT

DYNEX SEPARATING DISCS - RENFERT

Dynex separating discs from Renfert are highly precise tools, of which we are very proud. 40 years of experience and permanent, intensive development work are incorporated in the discs. They are produced using the latest manufacturing methods and the strict raw material controls ensure that only the materials are used.

Our separating discs attain a cutting speed of up to 300 km/h (186,4 miles per h). They separate powerfully, safely and highly precisely at high speed. To achieve this type of high performance, a careful combination of selected raw materials and a high degree of dimensional accuracy is decisive. In addition to the very high-quality abrasives, such as the finely coordinated diamond particle sizes, as well as aluminum oxide with a very high degree of purity, the binding agents are also consistently tailored to their respective area of application.

All Dynex separating and trimming discs, including the ultra-thin versions, are reinforced with double glass-fiber. The reinforcement is a component of the disc core and is fused completely with the carrier material. In a nutshell this means for you: outstanding durability, flexibility and reliability.

Function & Performance

- * Extremely flexible and robust diamond separating and grinding disc with glass fiber reinforcement
- * Created for separating and grinding ceramic, zirconium oxide and lithium disilicate.

Advantages

- * Extremely thin and flexible for precise separation of interdental spaces and grinding flat surfaces.
- * Quick and reliable separation of press sprues.
- * Minimal vibration and heat generation in order to prevent cracks and shipping with all ceramic materials.

Key functions

- * Ideal combination of flexibility and rigidity.
- * Excellent cutting and grinding performance thanks to a cutting disc saturated with diamond particles.
- * Maximum flexural and breaking strength due to a thin, double cross-linked, glass-fiber reinforcement.
- * Above average service life due to unique constituents.
- * High radial run-out precision.
- * Cutting, separating and grinding with one disc.
- * No residues, no grinding marks on the restoration.
- * Very low dust generation with minimum odor development.

US DENTAL DEPOT is an Authorized RENFERT Dealer in US.

Joe Dandy discs 0.6 mm

JOE DANDY DISCS - KEYSTONE

The Joe Dandy Type Discs are made of pure rubber-bonded silicon carbide abrasive in a special binder. They are used for fast, cool cutting and finishing on porcelain, acrylic, gold, alloys and other materials. These discs come in various sizes along with Flat Double Cutting, Flat Safe Sided, Cup Double Cutting, Cup Outside Cutting and Cup Inside Cutting.

Features:

- * Made of rubber-bonded silicon carbide
- * Available Styles: Flat Double Cutting, Flat Safe Sided, Cup Double Cutting, Cup Outside Cutting, Cup Inside Cutting
- * Available Sizes: 1/2 (12.7 mm), 5/8 (15.9 mm), 3/4 (19 mm), 7/8 (22.2 mm), 1 (23.8 mm)
- * .023" (0.6 mm) thick
- * Available in 100/Box
