TWO STRIPER DIAMONDS - PREMIER
TWO STRIPER DIAMONDS - PREMIER

Two Striper? Diamonds utilize P.B.S.? bonding that maximizes the exposure of diamond cutting surfaces especially at the tips and upper circumference of the diamond instrument where most cutting occurs. Crystals placed evenly and precisely in a uniform matrix are fused permanently to a surgical-grade stainless-steel shank; they are guaranteed not to fall out. As a drill bit for a rotary cutting mechanism or handpiece, diamond burs are often used by dentists to grind down tooth surfaces in preparation for restorations. This process often

leaves a rough surface that requires polishing.

Burs Diamond

Fg for Zirconia SSWHITE

GREAT WHITE ZIRCONIA DIAMONDS - SS WHITE

GREAT WHITE ZIRCONIA DIAMONDS - SS WHITE

Features:

If you have used standard diamonds or carbide burs to cut through a crown with a zirconia substructure or to gain endodontic access, you already know the time-consuming frustration of this task. You can ease the frustration of cutting through these hardest of dental materials with Great White Z diamonds to save time and efficiently cut through zirconia and PFM crowns. Use of Great White Z has been shown to reduce vibration and risk of micro-fractures, adding to a better patient experience
