LIMELITE LC CAVITY - PULPDENT

LIMELITE LC CAVITY - PULPDENT

Features:

Fluoride releasing - Radiopaque - Universal Shade
Contains Hydroxyapatite in a urethane dimethacrylate resin
Specially formulated for use with adhesives, composites and traditional restorative materials, Lime-Lite contains hydroxyapatite in a urethane dimethacrylate resin. It releases calcium, hydroxyl, phosphate and fluoride ions, which are known to be beneficial to tooth structure, to stimulate secondary dentin formation and to have cariostatic properties.

- * Light cure base/liner - sets extremely hard
- * Chemically bonds to adhesives and composites
- * Releases favorable calcium, hydroxyl, phosphate and fluoride ions
- * Stimulates secondary dentin formation
- * Insoluble in water and oral fluids
- * Convenient syringe dispensing

Cements and Liners

Compomers Type 2

COMPOMER EQUIA FORTE - GC

A type of dental material used for restorative purposes. It is a combination of two dental materials: composite resin and glass ionomer cement. Hence, the name "compomer" is derived from the words "composite" and "ionomer."

Compomers are often used as dental fillings for small to medium-sized cavities, particularly in areas where the teeth undergo moderate chewing pressure. They offer some of the benefits of both composite resins and glass ionomer cements.

The main characteristics of compomers include:

1. Aesthetic appearance: Compomers can be color-matched to the natural shade of the patient's teeth, making them blend in with the surrounding tooth structure.
2. Fluoride release: Like glass ionomer cements, compomers release fluoride over time, which can help in preventing tooth decay and strengthening the adjacent tooth structure.
3. Wear resistance: Compomers have reasonable wear resistance, making them suitable for use in areas with moderate chewing forces.
4. Adhesive properties: Compomers can bond to the tooth structure, providing a good seal and reducing the risk of further decay or microleakage.

However, compomers also have some limitations. They are not as durable or long-lasting as pure composite resins and may not be suitable for use in high-stress areas of the mouth. Dentists typically consider factors such as the size and location of the cavity, the patient's oral habits, and the aesthetic requirements when deciding whether to use a compomer or other restorative materials.

ZERO-G BIO-IMPLANT CEMENT - TAUB

ZERO-G BIO-IMPLANT CEMENT - TAUB

ZERO-G is a dual-cure implant cement and is recommended for intermediate to long-term cementation of implant-retained restorations. During recall the restoration can be easily removed.

This product provides excellent radio-opacity for good visualization after cementation to document complete clean-up, as well as diagnostic examination upon follow-up.

ZERO-G implant cement is retentive, and easily allows removal of excess cement, where it may occur. Unique color has great contrast to gingival tissue, creating easy visualization. Simple, easy clean-up.

Light-cure: 20 seconds - allows complete margin curing.

Self-cure: Working time: 1 min 45 sec. Set time: 2 min 30 sec.

This cement can also be used for traditional crown and bridge restorations when following pocelain or Zirconia bonding procedures.

Ionomer Base & Liners Cements

GLASS IONOMER BASE CEMENT - SHOFU

GLASIONOMER BASE CEMENT - SHOFU

Advantage!!!

A high compressive strength base cement formulated for dentin replacement
Recommended as a supportive, protective base under stress-bearing amalgam, composite and porcelain restorations.
Compressive strength (147 MPa) High fluoride release reduces the occurrence of secondary caries Radiopaque Low solubility Easy mixing and handling
Biocompatible and chemically bonds to dentin and enamel Pediatric temporary cusp replacement.

US DENTAL DEPOT Inc is an Authorized SHOFU Dealer in the US.

Cements and Liners

Ionomer Luting Cements Type 1

GLASIONOMER CX - SHOFU

GLASIONOMER CX - SHOFU

Advantage

An enhanced Glass Ionomer luting cement with prolonged working time
Indicated for cementing crowns, inlays, long span bridges and orthodontic appliances.

Prolonged working time with no change in viscosity followed by a Snap-Set
Low film thickness (20 µm) with high compressive strength (177 MPa)
Bonds to both dentin and enamel to provide an excellent marginal seal to overcome post-operative sensitivity High fluoride release Radiopaque Easy mixing, handling and resistant to water contamination at the initial stage.

US DENTAL DEPOT Inc is an Authorized SHOFU Dealer in the US.

Ionomer Restorative Type-2

GLASIONOMER II - SHOFU

GLASIONOMER II - SHOFU

Advantage!!!

A clinically proven filling material that chemically bonds to enamel and dentin. Appropriate for restoring cervical erosions, Class III, Class V and [pedodontic](#) restorations. Biocompatible with high fluoride release and recharge. Available in 4 blendable shades: universal, yellow, gray and brown. Chemically bonds to enamel and dentin. High compressive strength (186 MPa) Coefficient of thermal expansion, similar to natural teeth, ensures marginal integrity. Good handling.

Glasionomer Base Cement.

US DENTAL DEPOT Inc is an Authorized SHOFU Dealer in the US.

Cements and Liners

Luting Resin Cements Dual

COMPOSITE LUTING CEMENT SYRINGE KIT - PRO-LINE

COMPOSITE LUTING CEMENT SYRINGE KIT - PRO-LINE

Includes

- * 1x 10g syringe
- * 3x Mixing Tip
- * 3x Intra Oral Tips

Auto-mix system, dual cure, filled multipurpose permanent cement, for use in final cementations of implant prosthesis, crown and bridges, inlays, onlays,

veneers, cementation of post & pins and periodontal splinting.

Features and Benefits:

- * Quick Cementation
- * Automix Handheld Syringe
- * Convenient, economical and especially used for multi-operatory practices.
- * No mixing, no air bubbles, no wasted material due to over mixing.
- * Ensures, predictable, accurate, consistent and homogenous mix every time.
- * Minimal heat generated (Protects pulps)
- * Radiopaque (Easy identification on x-ray)
- * Low Film thickness, provides easy placement of crowns & bridges
- * Fluoride Release, reduces secondary caries.

Physical Properties:

- * Working time: 2 minutes.
- * Setting time: 5 minutes.
- * Compressive strenght: 266 MPa
- * Flexural strenght: 133 MPa

PANAVIA KITS - KURARAY

PANAVIA KITS - KURARAY

Description

PANAVIA - F 2.0 is an universal resin cement which shows high bond strength to tooth structures, metals and ceramics. PANAVIA? F 2.0 has been regarded as a guarantee for permanent adhesive technique in the areas of all-ceramics and metal restorations especially for high-quality and difficult restorations. It is recommended by leading universities as a premium product. The self-etching cement system prevents postoperative sensitivity and provides consistently good results. The anaerobic curing properties which do not begin until direct contact has been made with the restoration (no more contact with oxygen) and the flexible consistency make PANAVIA? F 2.0 a popular aid in daily practice. Even after releasing fluoride, the cement maintains its high mechanical strength due to the special surface coating technology of sodium

EMBRACE RESIN CEMENT - PULPDENT

EMBRACE RESIN CEMENT - PULPDENT

Features:

Dual Cure - Fluoride Releasing - Radiopaque

Contains No Bisphenol A, No BIS-GMA, No BPA Derivatives

For cementation of PFM, gold, CEREC?* and reinforced ceramics for crown and bridge;

Inlays, gold, metal, titanium and fiber posts

Embrace Resin Cement is the first self-adhesive resin cement that bonds to the slightly moist tooth. Embrace is a moisture-friendly, ionic resin, not a glass ionomer, and is fully compatible with the moist oral environment. Embrace forms chemical bonds to dentin and enamel, precious and non-precious metals, ceramics, composites, and fiber posts. Bonding agents are not required; however, they can be used if desired. It is not necessary to etch dentin, but etching uncut enamel surfaces is indicated.

Embrace Resin Cement is non-irritating, self-adhesive, contains no solvents, requires no etching or drying of dentin, and provides an exceptional seal against microleakage. These features eliminate the major causes of sensitivity.

- * Self-Adhesive - Moisture Tolerant
- * Bonds in a slightly moist field
- * Self-adhesive properties
- * Self-etching to dentin
- * Eliminates microleakage

FUSION-ZR VENEER CEMENT - TAUB

FUSION-ZR VENEER CEMENT - TAUB

FUSION-Zr is self-adhesive, light cure veneer cement and is indicated for the adhesive cementation of all-ceramic restorations, Lithium Disilicate and CAD/CAM type materials, where light curing is desired.

SPEED-SET - Highly light sensitive, cures completely and fast.

FUSION-Zr can be used on all porcelain crowns.

Ultra grip placement gives FUSION-Zr a unique stay-put viscosity that holds veneers in place.

Easy peel-a-way cleanup.

Cements and Liners

OHCA Cements and Liners

HYDROXYLINE - CALCIUM HYDROXIDE CEMENT AND LINER - TAUB

HYDROXYLINE - CALCIUM HYDROXIDE CEMENT AND LINER - TAUB

Hydroxylite's thin 'varnish' film forms a chemical and physical barrier that seals tubules and protects the pulp from acids in cements and acid etching solutions. Use it under both temporary and permanent cementation to protect the pulp. It will prevent thermal and 'pulp' shock.

Easy to apply - sets in 15 seconds or less- can be used under all filling materials including composites and amalgam. Its thin resinous film makes it highly suitable for both posterior and anterior composite restorations. The material will not soften up or wash out under the restoration. Use it under glass ionomer liners to eliminate sensitivity and give protection during etching. Hydroxylite eliminates the need for most bases and varnishes.

Hydroxylite is compatible with all resins and will not affect the color the resin.

Hydroxyline TC is a dentin colored film which maintains the composite resins' esthetics for thin Class V restorations. It will not 'whiten out' the resin as other opaque liners do.

PRO BLEND ULTRA CALCIUM HYROXIDE - PROLINE

PRO BLEND ULTRA CALCIUM HYROXIDE - PROLINE

Pro-Blend ultra is a unique light-cured, radiopaque, dentin adhering liner and base material containing calcium hydroxide and calcium hydroxyapatite in a urethane dimethacrylate (UDMA) base.

It is a highly filled resin (for a liner) with minimal shrinkage and water absorption.

Pro-Blend ultra has a higher viscosity than conventional liners, eliminating the need for a ball-type applicator. Its superior strength and water insolubility (it won't leach out) make Prime-Blend ultra the material of choice under composite, amalgams, gold, and etc.

Pro-Blend ultra is easily contoured with high-and low-speed hand pieces.

No more instrument-to-pad-to-mouth delivery. No more contamination of cavo-surface margin upon entry into cavity preparation!

CALCIUM HYDROXIDE CEMENT AND LINERS - BOSWORTH

HYDROX - BOSWORTH / Keystone

Hydrox radiopaque calcium hydroxide paste is a rigid, self-setting cavity liner and pulp capping agent. Hydrox eliminates all chemical and thermal sensitivity by sealing dentinal tubules and protecting the pulp.

Hydrox serves as a protective barrier that insulates the dentin and pulp from acid-containing cements and restorative materials.

Works well under glass ionomers and will not affect amalgam or the polymerization of composites. The superior flowability of Hydrox permits uniform coverage and controlled placement into preparations.

Tips: Hydrox can be used as a temporary cement. Hydrox's high pH level acts to inhibit bacterial growth at the cavity wall. This property is particularly important for the treatment of teeth with complicated crown fractures, open apices, or root perforations.

Phosphate Cements

HY-BOND ZINC PHOSPHATE CEMENT - SHOFU

HY-BOND ZINC PHOSPHATE CEMENT - SHOFU

Combines tannin fluoride with high compressive strength to produce an innovative material Excellent for seating permanent prostheses. A superior zinc phosphate cement containing tannin fluoride and offering high compressive strength.

Specifications:

- * Seals dentinal tubules and minimizes post-operative sensitivity
- * Excellent for seating permanent prostheses
- * Film thickness (25?m)
- * High compressive strength (98 MPa)
- * High level of radiopacity
- * Apply directly to prepared dentin
- * Neutralizes the harshness of phosphoric acid

US DENTAL DEPOT Inc is an Authorized SHOFU Dealer in the US.

Temporary Cements

NON EUGENOL TEMPORARY CEMENT - PRO-LINE

NON EUGENOL TEMPORARY CEMENT - PRO-LINE

Cementation of crowns, bridges and splints. Retention of temporary crowns, sealing dressing in teeth during root canal therapy procedures. Trial cementation of permanent restorations prior to final insertion. Testing of interproximal contact prior to final placement.

Advantages:

- * Different outlets prevent cross contamination
- * Efficient mixing reduces waste
- * Radiopaque
- * Non-Eugenol for use in cases where a Eugenol temporary cement is not recommended
- * Protects the gingival tissue

- * Salivan resistant
- * Excellent handling properties
- * Sewrely resists the forces of mastication to enhance patients comfort
- * Insoluble in mouth fluids and retains a tight marginal seal to prevent seepage of these fluids under the restorations. The cement will withstand functional stresses and permit ease of removal.
- * In addition it has sufficient flow to facilitate complete seating of the restorations. The product is intended for use less than 30 days

Cements and Liners

ZOE & Zinc Cements

ZINC OXIDE EUGENOL CEMENT KITS - PROLINE

ZINC OXIDE EUGENOL CEMENT KITS - PROLINE

- * This cement has a sedative effect on the pulp and is especially useful for cementation on prepared teeth with exposed dentinal tubules.
- * The addition of polymers as reinforcing agents have transformed it into a final cement and intermediate restorative material with a compressive strength of 5400 psi.
- * Offers excellent adhesion and easy removal.
