PROSTHETIC CONNECTION INSERTS - CERVICO BY INNOVATO

PROSTHETIC CONNECTION INSERTS - CERVICO BY INNOVATO

A VPI Prosthetic connection insert is a unit with innovative design that replicates the prosthetic connection and platform of a given implant. The innovative external design allows the installation of the insert into the base of the mold in only one functional orientation and a stable position. The innovative internal design of the VPI Insert allows it in many occasions to be functional with multiple platform sizes of the same prosthetic connection. Each insert is available with a retention screw that allows its safe coupling to the mold. The insert has its item number and an arrow laser printed on its outer surface. A plethora of different VPI Inserts are available in order to fulfil the clinical needs. Please refer to the VPI Prosthetic connection inserts compatibility chart in order to determine the one that fits your needs.

SILICONE INSERT - CERVICO

SILICONE INSERT - CERVICO

Features:

This silicone insert allows the fabrication of custom healing abutments and impression posts that have a custom body off centered in relation to the axis of the temporary abutment or impression post. This is particularly useful for lingually placed implants in immediate extraction and implantation protocols.

Available in Centered & Off Center

TABS - CERVICO BY INNOVATO

TABS - CERVICO BY INNOVATO

The anatomical tabs correspond with shapes and dimensions of the root trunk of the natural dentition. They are used to measure and identify the correct size and shape cervical profile that will provide the foundation for the optimum final prosthesis design and fabrication.

The Cylindrical tabs have a diameter that varies from 5 to 12 mm and are suitable in order to measure and evaluate the available mesio-distal space in a given edentulous space.

IMPLANT INSTRUMENTS - AMERICAN EAGLE

AMERICAN EAGLE - IMPLANT INSTRUMENTS

Feature:

Titanium Implant Instruments are made out of medical grade titanium and will not scratch or damage titanium implants. All instruments are manufactured in the USA and designed with rounded toes to safely access subgingival areas. Lightweight EagleLite handles also reduce hand fatigue.
